

Oracle EBS R12.2 Upgrade Automation Tool

Shorten your upgrade by 30%

Upgrading to Oracle E-Business Suite R12.2 requires manual remediation of all custom objects, and the management and execution of this process is the key to an efficient and successful upgrade. ennABLE is a proprietary automation tool that reduces the cost, duration, and manual effort required to assess, remediate, migrate, and test all customizations during the R12.2 upgrade process.

Key Features

Automatically identify all customizations and required code changes	✓
Identify missing and suspect objects	✓
Assign or retire custom objects and pick and choose what to remediate	✓
Categorize custom objects by complexity, type, and status	✓
Automatically remediate and migrate custom objects from R12 to R12.2.X	✓
Generates a mass migration script and MD.120 document	✓
Integrity Check (internal control process)	✓
To-be objects validation process	✓
Test automation for technical objects and inbound/outbound connectivity	✓

How It Works

Assess and identify all customizations

We automatically identify all impacted and potentially impacted custom objects in your current Oracle EBS version and all required code changes. Each object is segregated by complexity and object type (Database, Setup, RICEFW (or CEMLI)).

Automated Remediation & Migration

ennABLE automatically makes all required code changes to the impacted custom objects in your existing R12 environment. After, a mass migration script and MD.120 document are generated to automatically migrate everything over to R12.2.

Test Automation

Automatically test all technical objects and inbound/outbound connectivity.

Steady-State Support

Proactive DBA support and performance monitoring using our proprietary TrendZ tool to identify issues before they escalate and reduce the cost of post-upgrade maintenance and DBA services.

Benefits

Reduce manual effort by 80%	✓
Reduce prep work by 30%	✓
Reduce downtime by 70%	✓
Reduce development cost, time, and complexity by 55%	✓
Shorten overall upgrade time by 30%	✓
Shorten cutover by 4-5 hours	✓
